TOP STORY

New study shows positive results for Alzheimer's drug

According to a new study, a drug that could potentially stop the progression of Alzheimer's disease has shown promising results. The drug, known as Aduhelm, was tested in a large clinical trial involving thousands of participants. The results suggest that the drug may slow down the progression of the disease.

IN CASE YOU MISSED IT

Advancing technology for better research and outcomes

The latest advancements in technology are revolutionizing the way we approach medical research and patient care. From wearable devices that monitor health conditions in real-time to AI-driven diagnostic tools, technology is playing a crucial role in making healthcare more effective.

SPOTLIGHT

Improving outcomes with technology

Technology is not just transforming healthcare; it's also improving outcomes. From telemedicine that allows patients to connect with doctors remotely, to personalized treatment plans based on genetic analysis, technology is driving unprecedented advancements in patient care.
