The coronavirus is a major threat to patient health, making it vital to locate and isolate infected individuals as quickly as possible. Abbott, a global leader in diagnostic tests, launches new molecular test for COVID-19.

Abbott's molecular test for COVID-19 runs on the company's ID NOW platform, which is about the size of a toaster -- providing rapid results in a wide range of healthcare settings. The test produces results in 15 minutes or less.

During a Pandemic
Advancing Hospital Diabetes Care

Our continuous glucose monitoring (CGM) technology is helping doctors, nurses and patients adapt to a new reality. It’s helping people with diabetes manage their condition in the hospital during the COVID-19 pandemic.

New Point-of-Care Test for COVID-19

We've launched a new molecular point-of-care test for COVID-19, the Abbott ID NOW COVID-19 test. The test runs on our ID NOW platform, which is about the size of a toaster -- providing rapid results in a wide range of healthcare settings.

High-Volume Testing for COVID-19

As the coronavirus pandemic continues, Abbott's molecular tests detect the virus. The Abbott ID NOW system allows hospitals and labs to run hundreds of tests daily. Hear from Abbott employees on our work in the months ahead.

How to Help Your Immunity

Here's how to help support your immune system and boost your immunity. We’ll share initial results from our shared value partnership in Rwanda to advance the fight against the coronavirus, scroll through our new overview story.

Spotlight: The Shared Value Initiative

Launching much-needed diagnostic testing. Supporting employees. Providing relief for those facing economic challenges. The coronavirus is impacting everyone -- from patients battling the virus, to frontline health workers...
