IN CASE YOU MISSED IT

STAYING ONE STEP AHEAD OF HIV

Last month, we shared breaking news vital to the global health community: Abbott scientists identified a new strain of HIV-1 — O1B. This is the seventh known subtype of HIV and is expected to have a profound impact on understanding HIV diversity. In the years to come, a patient infected with this strain could present a unique clinical picture and pose a significant challenge for those planning and implementing treatment strategies. In the meantime, the scientific impact of this discovery matters: it advances our understanding of HIV biology and will be critical in the coming decades. Find out how
